Just finished all the glassing this morning. The fuz is then wrapped in cling film and packing tape . . I will leave to set before all the hard work starts .

Work has been restarted pulg will hopefully be finished in the next day or so. Resin and carbon ordered from easy compersits so will start glassing this week or next.. I am doing the canopy and cockpit lip differently this time by separating them first and glassing separately .

Wing seat and fin now cut will glue together sometime this week.

That's an easier way of getting the wing root in... every day's a school day!

Now I am near the end of my dg 800 build I have started one more build. I am not planning it to be a quick build maybe finish it sometime next year. Plans done on a movie projector again. Started to carve plug on Sunday 2.1/2 hours so far. If it turns out ok I may make a mould this time?
